

## **Build empathy**

The information you add here should be representative of the observations and research you've done about your users.

## Says

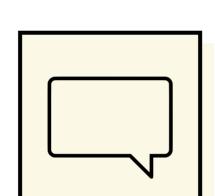

What have we heard them say?
What can we magine them saying?

The project would require access to data on students performance qualification and job placements

There students be opportunities for introverts to develop their personality

These models help you to make a trend analysis of university

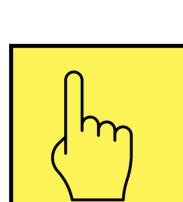

Again again some attributes play the very important role while analyzing the students

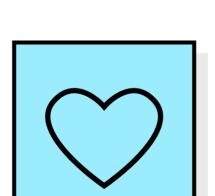

Identifying Patterns and Trends in Campus Placement Data using Machine Learning

The stakeholders is struggling with his CGPA for campus placement.

One of the most challenging tasks in the education sector in Indian is to predict student academic performance due to a huge volume of student data

As placement activity is very much important in university point of view as well as student point of view

Industries visit the

college to select

students depending

on their ability to

work, capability,

focus, aim.

A university

placement plays a

very important role to

get more admissions

and maintain the

reputation in the

world

Student feel incompetent while entering an industry

**Thinks** 

What are their wants, needs, hopes, and dreams? What other thoughts might influence their behavior?

Trends will also help in giving the companies reasons as to why they should visit university again and again

Students are the mains stakeholders of universities and their performance plays a significant role in a country social and economic growth by producing creative graduate innovates and entrepreneurs

Where it had various factors non candidate getting hired such as work experience, exam

percentage etc

Our solution revolves around the placement season of a business school in india

Feels

What are their fears, frustrations, and anxieties? What other feelings might influence their behavior?

## Does

What behavior have we observed? What can we imagine them doing?
